

MCAE-MHAE 115÷127

Microsystem
14,7÷26,3 kW

Condensing units and reversible condensing units, air cooled with axial fans.
Range equipped with hermetic scroll compressors.

main features

INDEX

Performance	page	6
Dimensional and installation characteristics	page	8
Hydraulic connection	page	9
Electrical connection	page	11

Standard use conditions

MCAE are condensing units air cooled with axial fans.

MHAE are reversible condensing units air cooled with axial fans.

They are suitable in air conditioning installations connected with remote evaporators.

The machine is designed for outdoor installation.

The units comply with the following Directives:

- Machine Directive 89/392/CEE (MD);
- Low Voltage Directive 73/23/CEE (LVD);
- Electromagnetic Compatibility Directive 89/336/CEE (EMC);
- Pressurised Equipment Directive 97/23/CEE (PED).

115 - 127 Approximate cooling capacity (in kW)
--

Example: MCAE 122

- Air cooled condensing unit.
- Nominal cooling capacity: about 22 kW.

main features

Features

- Chassis made of Peraluman panels; base in galvanised sheet steel; sound proofed compressor chamber.
- Hermetic Scroll rotary compressor complete with internal overload protection.
- Air side exchanger composed of coil with copper pipes and aluminium fins, complete with protection grille.
- Axial fan featuring external rotor, internal overload cut-out, complete with protective grille.
- Flare refrigerant couplings with valve.
- Refrigerant circuit with mild copper tubes and silver alloy welding. Complete with filter drier, charge connections, safety high pressure switch with manual reset (in compliance with Directive 97/23/CEE (PED), safety low pressure switch with automatic reset, control pressure switch for winter operation (for MHAЕ 115), crankcase heater, liquid-humidity indicator, settable safety valves, thermostatic expansion valve (for MHAЕ), cycle inversion valve (for MHAЕ), non-return valve (for MHAЕ), liquid receiver and gas separator with safety valve (for MHAЕ).
- Unit with IP24 protection grade.
- Unit complete with:
 - ductable condensate discharge (for MHAЕ);
 - R 407C refrigerant charge foreseen for length of gas and liquid lines each of 7 m.

Electrical board

- Electrical board can be accessed from front panel compliant with IEC standards, complete with:
 - main power supply switch with interlocking safety door isolator;
 - electrical wiring arranged for power supply 400V-3ph-50Hz+N;
 - auxiliary circuit power supply 230V-1ph-50Hz derived from main power supply;
 - phase sequence controller;
 - automatic switches for protection of compressor and auxiliary circuit;
 - power contactor for compressor;
 - user interface terminal board ;
 - removable machine controls.
- Programmable microprocessor electronic board handled by the keyboard inserted in the machine. .
The board performs the following functions:
 - adjustment and control of cycle inversion (for MHAЕ); of the safety delays; of the compressor hour-run-meter; of the defrost cycles (for MHAЕ); of all the functions that control the working interventions of the unit devices;
 - complete protection of the unit, possible cut off of the machine and display of the active alerts;
 - display of operating devices by LED; of the heat pump or chiller operation by LED, (for MHAЕ); of defrosting in progress by LED (for MHAЕ);
 - self-diagnosis with continual checking of the machine operational status.
- Advanced functions:
 - arranged for serial connection, with RS485 outlet for logical dialogue with building automation, centralized systems and supervision networks.
 - computer assisted unit testing.

Accessories supplied loose

- **KSA** - Rubber antivibration mountings.
- **KFI** - Low ambient control for continuous control of the fan rotation speed down to outdoor air temperatures of -10°C during chiller operation, for ambient air temperatures up to 30°C during heat pump.
- **KIS** - RS 485 serial interface for interconnection with distributed intelligent systems for integrated building automation.
- **KCH** - RS232 hardware key to be connected to supervision systems, to combine with one or more KIS serial interface modules in centralized unit management system.

(*) At the following conditions: condenser inlet air temperature 35°C; suction saturated gas temperature 7°C.

(**) At the following conditions: evaporator inlet air temperature 6°C W.B.; dew point 50°C.

(***) The sound pressure level in dB(A) refers to readings taken 5 m from the unit with a directionality factor equal to 2 (reduce this value by 3 dB(A) to obtain the open field value).

operation limits

Cooling cycle:

- Condenser inlet air temperature:
- version MCAE - MHAЕ 20°C - 43°C D.B.

Heating cycle:

- Evaporator inlet air temperature:
- version MHAЕ -5°C - 20°C D.B.

Keyboard and display description

- 1 = DISPLAY:**
it displays the value of all the parameters, the codes of the possible alarms and the status of all the resources.
- 2 = ON/OFF, RESET - DOWN key:**
it allows to switch ON, OFF and the reset of possible alarms of the unit. Furthermore allows to scroll down the value of the parameters.
- 3 = MODE - UP key:**
it allows to scroll up the value of the parameters.
- 4 = Summer LED:**
it indicates that the unit is working in cooling cycle.
- 5 = Winter LED:**
it indicates that the unit is working in heating cycle.
- 6 = Compressor LED:**
it indicates that the compressor are ON or that a delay is in progress.
- 7 = Defrosting LED (only active on MHAE):**
it indicates that the unit is in the defrosting mode.
- 8 = Power supply LED:**
it indicates the presence of power supply in the unit.

N.B.

The keyboard with display makes it possible to view all process variables of the unit. For technical service, it makes it possible, with a password, to access the unit management parameters (access allowed only for authorized personnel).

KIS serial interface RS 485 (accessory)

Serial connection

The units are equipped with an electronic controller, that is compatible with an external system through a serial communication line. The communication protocol allows the access to all the functions of the unit, such as:

- setting all the values accessible by the keyboard;
- reading all the process variables of the digital as well as analogue inputs and outputs;
- reading the various alarm codes and if necessary resetting them;
- reading all programming parameters or changing some of them.

fig. 4

Installation

- The unit is fitted with a 3-way flare refrigerant connection with cock.
- The flare pipes are equipped standard with the machine so as to allow joining between the condenser flare connections with cocks and the system line. Connection is made through braze welding.
- The machine must be installed outdoors. Segregate the units if installed in areas accessible to persons under 14 years of age.
- The unit can be supplied on request with anti-vibration rubber supports (KSA).
- The unit should be placed in horizontal position, respecting the minimum technical service distances recommended in figure no. 5, keeping in mind accessibility to the refrigerant and electrical connections.
- The unit features a condensate drain pan (MAHE only).

N.B.:

- Special care should be taken when moving the unit in order to avoid damage to the external structure and to the internal mechanical and electrical components (figure 4).
- Storage temperature limits: $-9^{\circ}\text{C}/+45^{\circ}\text{C}$. Do not stack units.

fig. 5

127	Liquid o.Ø	mm	15,9-5/8"	15,9-5/8"	15,9-5/8"	15,9-5/8"	15,9-5/8"
	Gas o.Ø	mm	22,2-7/8"	22,2-7/8"	25,4-1"	25,4-1"	31,8-1 1/4"

(*) The equivalent length can be roughly obtained by adding 1.2 m for each bend and 1 m for each change of cross-section to the straight pipes

N.B.:
The refrigerant pipes connected to the terminal unit should be made in EN 12735 refrigerant systems copper.
For further details see the user's manual.

Connection diagram

fig. 6

Height difference

The maximum admitted difference in height between the outdoor and the indoor unit is 8 m; greater height differences are possible provided traps are included every 6 m on the gas line.
The maximum equivalent distance of the connection line is 25 m.

Electrical connections

- The electrical board can be accessed from the front panel of the unit.
- Connections must be made by qualified personnel in compliance with current standards and with the diagrams supplied with the machine.
- Always install, near the machine in a protected area, an automatic main switch with a characteristic delay curve, of suitable capacity and interruption power, and with a minimum contact aperture of 3 mm.
- The earth connection of the unit is compulsory by law and protects the user's safety when the machine is operating.
